EDUCATION

Georgetown University, Washington, DC	September 2025 – Present
Research Scholar, McDonough School of Business	
Shanghai Jiao Tong University, China	2021 – Present
Ph.D. Candidate in Finance (ABD), Shanghai Advanced Institute of Finance (AACSB-accredited)	
Shandong University, China	2017 – 2021
B.A. in Finance, <i>Summa Cum Laude</i>	

RESEARCH INTERESTS

Corporate Finance, Household Finance, and Real Estate

PUBLICATIONS

Curse of low-skilled emigration on human capital formation: Evidence from the migration surge of the 2000s [\[DOI\]](#)

with Sam Hak Kan Tang and Yong Wang

- *World Development*, 2025
- **ABDC A***; a leading development economics journal
- **Highlights:** Exploiting the surge of low-skilled migration to OECD countries in the 2000s, we show that the prospect of low-skilled emigration discourages human capital formation in sending countries, reducing schooling and tertiary attainment—an effect concentrated in middle- and high-income countries.

WORKING PAPERS

- Trade Diversion and Government-Led Credit Provision: Evidence from China's VAT Rebate Loan Program** [\[SSRN\]](#)
 - **Job Market Paper**
 - Best Poster Award Finalist, 13th ABFER Annual Conference
 - Travel Grant, 2nd HKU Next-Gen Finance PhD Workshop
 - **Abstract:** This study examines how firms respond to trade disruptions and how government-facilitated credit access shapes these responses. Firms increase sales of targeted products to markets without trade barriers, with larger increases for firms with access to a government-facilitated loan program. Firms without access switch into brand-new products and retain larger workforces. The staggered rollout of the loan program eases firms' short-term financing constraints and helps them avoid the profit losses induced by locked liquidity during disruptions. However, the loan program cannot guarantee that a firm survives the disruption; it can only shape how the firm responds.
- Bank Ownership as a Political Instrument: Evidence from Chinese Local Governments** [\[SSRN\]](#)

with Naide Ye

 - **Returned for Revision (R&R)** at *Review of Finance* (ABDC A*, FT50)

- **Abstract:** We study how local governments use equity stakes in banks as a political and fiscal instrument to expand off-budget credit. We develop a novel city-bank-year measure of Chinese local government ownership from banks' shareholder registries and link it to transaction-level borrowing by local government financing vehicles (LGFVs). We find that a one-standard-deviation increase in a local government's ownership stake in a bank raises that bank's credit to local government borrowers by 11%. We exploit a regulatory reform that forced private shareholders to unwind bank holdings to support a causal interpretation. This effect is stronger when political competition is intense, officials near the end of their terms, and fiscal constraints are tighter. Greater local-government ownership also makes LGFV investment more responsive to industry performance, yet these projects are more likely to fail, indicating that ownership directs credit to attractive industries at the cost of project quality.

3. Political Ideology and Durable Spending [\[SSRN\]](#)

with Yongqiang Chu, Francesco D'Acunto, Janet Gao, and Roman Wang

- HKU Jockey Club Enterprise Sustainability Global Research Institute Paper No. 2026/057
- **Abstract:** We study political ideology as a driver of heterogeneous durable spending. Research in psychology suggests that conservatives' personality traits lead them to focus on the investment properties of durables, whereas liberals focus on consumption value. Combining U.S. voter registration records with housing transactions, which capture both consumption and investment motives, we show that conservatives transact more frequently, especially in secondary properties, which do not necessarily provide any consumption value. Conditional on transacting, conservatives more often trade down and realize capital gains, while liberals trade up and increase housing consumption. Conservatives' transactions, but not liberals', respond more strongly to financial incentives: interest rates, the opportunity cost of housing investments relative to equities, and house-price appreciation. Within households, ideology does not combine linearly: mixed-ideology couples transact less than ideologically homogeneous ones of either color, and their choices align more closely with the man's ideology.

PRESENTATIONS & DISCUSSIONS

Conference and Workshop Presentations

- 2026 Financial Management Association (FMA) Annual Meeting[†]; 66th Annual Southern Finance Association Meeting[†]; Asian Bureau of Finance and Economic Research (ABFER) 13th Annual Conference (Poster Session); China Financial Research Conference (Tsinghua PBC School of Finance); Eighth China International Conference in Macroeconomics
- 2025 Dishui Lake International Conference in Finance (Shanghai University of Finance and Economics); 8th International Conference of China and Development Studies
- 2024 8th China Center for Economic Research (CCER) Summer Institute, Peking University
- 2023 11th Hong Kong Economic Association Biennial Conference*

Seminar Presentations

- 2026 Georgetown University (EGSO Seminar)
- 2022 University of Western Australia (Economics)*; Australian National University (Crawford School)*

[†] scheduled. * presented by coauthor.

TEACHING EXPERIENCE

Georgetown University

Corporate Valuation (Undergraduate)

Fall 2026

Shanghai Jiao Tong University

Principles of Finance, Corporate Finance (MBA, Master of Finance)
Financial Literacy (Undergraduate)

All courses taught in English

Fall 2023–Spring 2025
Spring 2024

Real Estate Finance (MBA)	Summer 2023
Advanced Business Analytics, Product Pricing Strategy (MBA)	2021–2022
Asset Management in Practice (MBA)	2021–2022

PROFESSIONAL EXPERIENCE

AlixPartners July 2026 – Present

PhD Economist (Contract)

- Developed the methodology for the firm’s flagship **Disruptive Index**, a proprietary composite index of corporate financial performance and macro-financial indicators, formalizing the framework into a rigorous measurement model following OECD guidance.
- Evaluated candidate indicators and tested normalization, weighting, and aggregation methods (z-scores, PCA/factor models).
- Prepared methodology documentation and executive-ready deliverables for non-technical stakeholders.

REFeree ACTIVITY

Ad Hoc Referee

Journal of Banking & Finance (ABDC A*), *Pacific-Basin Finance Journal* (ABDC A)

Conference Referee

ICGS Conference 2026 (HEC Montréal)

GRANTS AND AWARDS

2026	Best Poster Award Finalist, 13th ABFER Annual Conference; Travel Grant, 2nd HKU Next-Gen Finance PhD Workshop
2025	China Scholarship Council Grant
2024	Excellent Teaching Assistant, Shanghai Jiao Tong University
2021–	Ph.D. Fellowship, Shanghai Jiao Tong University
Pre-PhD	National Scholarship for Undergraduate Students; 1st Class Honors, Shandong University and Shandong Province Government

SKILLS

Programming: Stata and Python

Language: English and Mandarin Chinese
